It is a pleasure to welcome the launch of the "Directory of European Organizations and Persons working on Soil Protection". It is timely and should prove an invaluable reference for all interested in this enormous area of work.

In the European Union we are moving now towards not just greater recognition of the need to protect soil but also in the policy sense towards placing soil protection at the same level as that for water and air. This is an immense task and needs to build on the expertise of committed individuals and organisations. In its communication "Towards a thematic strategy for soil protection" presented in 2002 the Commission was fortunate to be able to draw on expertise and the knowledge base developed over many decades. The communication described the threats leading to soil degradation was very well received by the other EU institutions and by society in general and kicked off a tremendous stakeholder involvement in considering the best approaches to soil protection. That involvement led to the encouragement of a framework approach based on the need to ensure protection and sustainable use.

The thematic strategy is due for launch around the end of 2005 and will benefit then from sound scientific support and from awareness raising across society in general. The launch of the directory will make the task of support and awareness raising more easy and beneficial and will make a lasting contribution to soil protection.

The “Directory of European Organizations and Persons Working on Soil Protection” is a joint initiative of the European Society for Soil Conservation (ESSC) and the project on Soil Conservation and Protection for Europe (SCAPE). The objective of the Directory is to produce a communication and information resource which could improve the linkages and mutual knowledge of the European actors dedicated to soil degradation and soil conservation issues.

This kind of information tool was not available until now and we hope it will help to facilitate scientific exchanges promote cooperative research activities and could provide a network representing a stakeholders nucleus that will support the calls of the EU on the elaboration and launching policies related to soil including the ongoing Soil Protection Thematic Strategy.

The Directory includes 204 organizations of national and international scope, enterprises, associations, NGO’s and also 620 individuals working on the various aspects related to soil protection. The present edition will probably enlarge in the future with the inclusion of entries not included in this first version

In order to facilitate different information needs it is included some Thematic Indexes by countries and by the 14 selected Working Areas

It have being also elaborated an interactive CD version of the Directory for using the advantages of computer information and communication facilities.

We hope **this Directory will be a useful** and handy catalogue for all of you. We are also open to receive missing entries and improvements for next edition
